Housing Affordability in Dodge County

Housing is considered affordable if it consumes less than 30% of a household’s gross income. At higher levels, families must choose between housing and other basic needs and will struggle to weather financial setbacks. In Minnesota, housing costs continue to consume a large portion of families’ income. For many, extended economic hardship is taking a toll.

The table above shows the number and percent of households at different income levels that pay 30% or more of household income for rental or ownership costs. It illustrates that the burden of housing costs weighs more heavily on lower-income families.¹

Even before the current economic downturn, housing needs were severe. In 2008, 1 in 8 Minnesota households spent at least half of their income on housing, up from 1 in 15 in 2000. Minnesota experienced the fastest increase of extremely cost burdened households of any state in the nation during this time period.²

In 2000, about 84% of Dodge County residents owned their home and 16% were renters. Of these, approximately 16.2% of homeowners and 20.9% of renters in Dodge County spent 30% or more of their household income on housing.³
