Home is the foundation in

Scott County

As Minnesota’s economy grows stronger, access to safe and affordable homes builds the foundation for living, working, and learning in all communities. Yet even working Minnesotans often lack good housing options, and aging homes create health and energy concerns.

In Scott County, there are about 37,776 owner and 7,332 renter households.1 More than 10% of homes are at least 50 years old.2

For 29% of owners and 46% of renters in Scott County, housing consumes 30% or more of their household income.3 This can mean inadequate spending on other basic needs like food and medicine. Saving for education or emergencies often becomes impossible, especially for lowest-income households.

RENTER INCOMES LAG BEHIND RENTS

In Scott County, 16% of households are renters.4 In most Minnesota counties, renter incomes have fallen as rents have risen. According to recent data for Scott County, real renter incomes have risen by 2%, while rents have risen by 12% since 2000.5

There are now 39 units affordable and available for every 100 extremely low-income renters in Scott County.6 The county ranks 69 out of the state’s 87 counties for the most units affordable and available to this income group.

RENTAL CHOICE KEY, BUT OPTIONS LIMITED

For many, renting makes sense. Young people starting out are often saddled with student debt. Seniors may not be able to afford or manage owning a home. Many do not have the savings or credit to qualify for mortgages. Workers relocating for jobs also need rental housing.

A safe, modest two-bedroom apartment costs $946 per month in Scott County.7 At the median renter household income of $37,840, a family could affordably spend $1,024 per month on rent.8 By definition, half of the county’s renters earn less than this median, and would need less expensive housing.

At $8.00 per hour, the state minimum wage for 2014, an earner must work 91 hours per week9 to afford the $946 rent for a modest two-bedroom apartment in this county.
Unaffordable housing and homelessness affect people of all ages in Minnesota.

An estimated 14,000 Minnesotans were homeless on a given night in 2012. Homelessness increased 32% statewide from 2006 to 2012.\(^{18}\)

On that 2012 night, 101 people were known to be homeless in the Scott/Carver County Region including:

- 27 children with their parents.
- 5 youth through age 21 living on their own.
- 12 seniors aged 55+.

Without stable housing, children face higher barriers to success in schools.

About half of the people experiencing homelessness in Minnesota are 21 or under.\(^{20}\)

Homelessness can cause delays in growth and development, as well as problems in school. Housing subsidies have been linked with better nutrition and school success for poor children.

In 2012, 7% of children in Scott County were living in poverty, up from 3% in 2002.\(^{21}\)

Owning a home.

84% of households in Scott County own a home. For white, non-Hispanic households, the county’s ownership rate is 86%, compared to 68% for households of color. As a state, Minnesota has the nation’s largest racial homeownership gap.\(^{13}\)

- The median sales price for non-foreclosed homes is $231,000 in Scott County, which is a real decrease of 18% since 2006.\(^{14}\)
- From 2005-2013, there were 5,491 foreclosures in the county.\(^{15}\)
- Statewide, 3.1% of primary mortgages were delinquent by 60+ days in early 2014, compared to an average of 1.7% from 1979 to 2004, before the foreclosure crisis.\(^{16}\)

In Scott County 9% of owner and 21% of renter households pay half or more of their income for housing, a situation known as “severe cost burden.”\(^{17}\)

Housing needs among seniors are growing.

The number of households headed by seniors aged 65+ in Scott County grew from 17,478 in 2000 to 20,296 in 2008-12.\(^ {12}\)

Currently, 1,245 are renter households. Statewide, 3 in 5 senior renters pay more than 30% of their income for housing.\(^ {23}\)

Seniors were also one of the fastest growing segments of the state’s homeless population between 2009 and 2012.\(^ {24}\)

Targeted investment can end homelessness.

Ending homelessness is possible with strategic public investment. For example, targeting housing and services to homeless veterans led to a 13% decline in homelessness for this group from 2009 to 2012 even as homelessness rose overall.\(^ {25}\)
